Adjustable Loading Feature
Rail Spacing Adjustment

When loading your shoe cover cartridges, if the rail spacing distance shown in the photo below is too tight (narrow) or spread apart too far to easily load the cartridges, it is simple to change the rail spacing distance using our exclusive adjustable loading feature as follows:

1) Using a hex key/Allen wrench, loosen the bolts attaching the labeled cross braces to the frame on the outside of both rails.

2) Adjust the rails to better accommodate your shoe cover cartridges and tighten the bolts.
